

Validation Engineer

Reporting to Head of Quality & Business Process Management

JOB DESCRIPTION

A leading multinational based in Limerick is currently looking to recruit a Senior QA Validation Engineer. This can be a permanent or contract position.

RESPONSIBILITIES

Co-ordination, implementation and active participation in the validation programme for all business computer systems.

- Conduct validation activities in compliance with US and EU regulations, and global corporate procedures.
- Provide input into all project phases i.e. from design through to the commissioning and qualification execution phases of the project.
- Develop validation documentation as required
- Review and approve documents prepared by the validation team, other functional departments and contractors.
- Execute qualification protocols as required
- Prioritize qualification activities in line with the project schedules and business needs.
- Prepare reports of executed protocols
- Resolve and assist in the closure of deviations initiated during qualification execution
- Initiate and implement change control activities.
- Co-ordinate re-validation activities
- Generate SOP's / other documentation as applicable
- Conduct training in validation methodologies and related procedures as required.
- Present validation systems at internal and external audits
- Support quality assurance programmes
